EDUCATION

Covenant University

B.Sc. Computer Science

Ota, Ogun State

CGPA: 4.93/5.0

Relevant Courses: Computer Security, Operating Systems, Algorithms and Data structures, Object Oriented Programming

EXPERIENCE

LPI Innovation Hub.

Mar 2025 – Sep 2025

IT Intern · Ibadan

- Performed vulnerability assessments and penetration testing using Nmap and Metasploit, identifying and validating security vulnerabilities across 13 laboratory environments.
- Deployed Ubuntu Linux on standard workstations and configured Kali Linux environments for vulnerability assessment and penetration testing (VAPT)
- Researched AI-related cybersecurity risks and contributed to technical documentation aimed at promoting security awareness and responsible AI usage
- Supported day-to-day network monitoring, troubleshooting, and IT helpdesk operations;

TECHNICAL SKILLS

Cloud & Infra: AWS EC2, S3, IAM, VPC, Security Groups, CloudWatch

Cybersecurity: Ethical hacking, Penetration testing, Vulnerability assessment, Digital forensics, Homomorphic Encryption

Security Tools: Nmap, Metasploit, Burp Suite, Wireshark, Gobuster, Hydra, John the Ripper

Tools & Platforms: Linux, Windows Server, VMware, VirtualBox, VS Code

Programming: Python, TypeScript, JavaScript, SQL — scripting, automation

PROJECTS

Secure Student Information System using Partial Homomorphic Encryption

2026

React, TypeScript, Express.js, SQLite, AWS EC2, S3, Paillier Cryptosystem

- Developed a full-stack student information system using React, TypeScript, Express.js, and SQLite, integrating the Paillier cryptosystem to support privacy-preserving computations over encrypted student data.
- Engineered a secure backend with JWT authentication, role-based authorization, and homomorphic encryption services to encrypt, process, and decrypt academic records without revealing sensitive information to the application layer

Windows VM Penetration Test: Privilege Escalation & Defense Evasion

2025

Metasploit, Kali Linux, Windows 11, Metasploitable 2, VirtualBox

- Conducted full penetration tests on a Windows 11 VM and Metasploitable 2, exploiting vulnerabilities and practising privilege escalation, defense evasion, and post-exploitation techniques
- Participated in a GDG campus challenge, successfully identifying and exploiting a vulnerability in a navigator application in a controlled CTF-style environment

Keylogger: Keystroke Monitoring Tool for Offensive Security Research

2024

Python

- Developed a Python-based keylogger for ethical research, capturing keystrokes and monitoring system activity in isolated lab environments to study offensive techniques and inform defensive countermeasures
